SATURDAY, APRIL 2, 1899.

DAILY WORK.

BY CHARLES MACKAY.

Who lags from dread of daily work,
And his appointed task would shrink,
Commits a folly and a crime;
A soulless slave—
A paltry knave—
A clog upon the wheels of time.
With work to do, and store of health,
The man's unworthy to be free.
Who will not give,
That he may live,
His daily toil for daily fee.

No! let us work! We only ask
Reward proportion'd to our task;
We have no quarrel with the great,
No feud with rank—
With mill or bank—
No envy of a lord's estate—
If we can earn sufficient store
To satisfy our daily need,
And can retain,
For age and pain
A fraction, we are rich indeed.

No dread of toil have we or ours
We know our worth, and weigh our powers;
The more we work the more we win;
Success to trade!
Success to spade!
And to the corn that's coming in!
And joy to him who o'er his task
Remembers toil is nature's plan;
Who, working, thinks,
And never sinks
His independence as a man!

Who only asks for humble wealth,
Enough for competence and health;
And leisure when his work is done
To read his book,
By chimney nook,
Or stroll at setting of the sun:
Who toils as every man should toil,
For fair reward, erect and free:
These are the men—
The best of men—
These are the men we mean to be.

Ships of War.

A very interesting paper was recently read on "The Ships of the Royal Navy," before the Society of Arts, in London, by E. J. Reed. From it we learn that until very recently the ships in the British navy were inferior in model and build to those of every other nation, and that vessels captured from France, were, for many years, English models. Since the introduction of steam, great improvements have been made in every department, and the ships of the present navy of Great Britain are as different to those in vogue forty years ago as horses are to donkeys. They have now a fleet of screw steamers, consisting of fifty-one line-of-battle-ships, each armed with eight-inch guns and 32-pounder solid shot, together with one and sometimes two 68-pounders. There are also nine block-ships, armed with eight-inch shell guns and 68 and 32-pounders, and four ten-inch guns to each. There are also twenty-eight frigates, powerfully armed, besides thirteen corvettes carrying each two eight-inch shell guns and one 68-pounder or one ten-inch shell gun. There are four mortar frigates, carrying thirteen-inch mortars and 68-pounders, eight floating batteries armed with 68-pounders, twenty-seven sloops, with 32-pounders, twenty-six gun-vessels with 68 and 32-pounders, and 163 gun-boats, each carrying one 68 and one 32-pounder—in all 331 steam vessels. A comparison is made between American ships and those of England, and it is admitted that the "Merrimac" and those large steam frigates lately built are equal to the best frigates in the British navy; still, it is maintained that the engine-power of the latter is superior to that in American war vessels, which gives them a great advantage.

A very great change has taken place in regard to the size of ships, the frigates of the present day are of one-fourth greater in tonnage than the largest line-of-battle-ships of fifty years ago. In the British navy, at the present time, there are 607 fighting vessels of all classes of an aggregate burden of 665,220 tons, with a steam power equal to that of 100,000 horses, and involving a cost of about \$140,000,000. There is incessant activity displayed in all the dock-yards, and the utmost attention is being paid to the construction of powerful first-class iron-clad vessels.

In the paper read by Mr. Reed on this subject, he states that Capt. Ericsson, of this city, in 1837, made a very favorable run down the Thames river with his screw propeller having the Lords of the Admiralty on board, and that notwithstanding the success of this experiment and the manifest advantage of a submerged propeller for a ship of war, the chief of the Admiralty Board made no sign in favor of the new propelling instrument. Capt. Ericsson therefore took it to the United States, where it was soon afterwards introduced into the American navy. It was not until 1845 that the screw propeller was introduced into the British navy, and such has been its success since that, that every vessel now built for that navy is a screw steamer—the paddle-wheel having been entirely superseded by it. The least thing which the British authorities can do, in consideration of what Capt. Ericsson has done for their navy, by arousing public attention to this superior propelling device, is to render him a respectable equivalent for the benefits derived from his services.

This suggestion is made as a question of public justice, as we understand that Smith & Wootton—subsequent inventors—have both been rewarded by the British Government.—*Scientific American.*

The Scotsman newspaper relates the following curious case of the recovery of a lost marriage ring:
"About the end of July or the beginning of August last, a woman named Catherine Ferguson, the wife of a miner named McLean, at Clifton, near the head of Loch Lomond, lost her marriage-ring whilst engaged in putting in or building peats, and notwithstanding that every search was made for it at the time it could not be found. About a fortnight ago the cat brought a rat into the house, and around the neck of the rat was the missing marriage-ring. It is supposed, as rats are known to carry off coins or pieces of silver or gold, that the ring had been taken to the rat's nest, where it had gone over the neck of one of the young ones and remained there until the animal had advanced in growth, and, curiously enough, been captured by the cat. Mrs. McLean, who had been about a year married, was no less rejoiced in getting possession again of her lost ring than surprised at the very singular way in which it was recovered.

A Southern paper thinks that the neutrality of the Atlantic Cable, which was so earnestly begged for by President Buchanan, has been fully established. It hasn't a word to say on either side.

A lady with a well-plumed head-dress, being in deep conversation with a naval officer, one of the company said, "it was strange to see so fine a woman so far and feathered."

Honors to Paul Morphy.

It could hardly be expected that this country, never backward to recognize the genius of her children, at least after it has commanded recognition abroad, should overlook the conquest of the world of chess by a young American Alexander. It is true that as the Macedonian hero stopped short of India in his great career, so the young Morphy, after laying Europe at his feet, is still vaguely defied by an alleged Ram Chudder something, who is published to mankind as the most wonderful living votary of the goddess Chess. But this new Poras must come to Paris if he wishes to be admitted in the hierarchy of the royal game; and, meanwhile, Paul Morphy is virtual Pope.

The New York Chess Club have determined so to hail him, and at their meeting on Monday night set on foot a subscription for purchasing and presenting to Paul a splendid set of chessmen in silver and gold, now to be seen at Messrs. Tiffany's, in Broadway, and originally manufactured for display at the Crystal Palace exhibition. The price at present asked for this magnificent little army is \$1,000, and the Club intend to mount it upon a true "Field of the Cloth of Gold," by proposing a board of equal elegance. They will also strike a medal in gold, (more carefully superintending the die, we trust, than was done in the case of the medal so recently issued in honor of Paul by some enterprising friends of the game), and they have accepted the offer of the American Watch Company to prepare an elaborate watch of the highest character for the young general who "takes no note of time" but by the loss of his opponent's game.

The movement is thoroughly legitimate, and does honor to all concerned in it.—N. Y. Times.

At the Madeleine (Paris) on Christmas Eve, a curious scene occurred. The well-known Abbe Batain preached in the evening, and as he is one of the most eloquent pulpits orators, as well as one of the most learned theologians of France, a very large congregation assembled to hear him. Ascending the pulpit, he gave forth no text, but a paucity of words in a sonorous voice. "A Savior is born unto us!" He then repeated the cry, and then said: "My brethren, why do you not receive that glad tidings with an Alleluiah?" Thereupon the whole congregation stood up and cried "Alleluiah!" After which he proceeded to deliver his sermon.

According to the Medical Magazine, the blood of a horse is poison in the veins of a dog; the blood of a sheep is poison in the veins of a cat; but the blood of a horse will revive the fainting ass. From this it follows, that when transfusion is practiced on human beings, human blood must be employed; and so employed, the practice is in some urgent cases not only safe, but forms the sole remedy.

WORTH KNOWING.—A young lady of this city, says the Philadelphia Evening Post, while in the country some years ago, stepped on a nail which ran through her shoe and foot. The inflammation and pain were of course very great, and lockjaw was apprehended. A friend of the family, however, recommended the application of a beet, taken fresh from the garden and pounded fine, to the wound. It was done and the effect was very beneficial. Soon the inflammation began to subside, and by keeping on the crushed beet and changing it for a fresh one as its virtue became exhausted, a speedy cure was effected.

Letters from St. Petersburg, quoted by the Gazette de Lyon, make known a rather grave incident in connection with the emancipation of the peasants. The Committee of the Government of St. Petersburg, after having terminated its labors, has drawn up a respectful address to the Emperor, praying him, after regulating the condition of the peasants, to occupy himself with a reform of all other classes in Russia, and to convolve the States General of Russia. This unexpected demand has produced a considerable impression at Court. The wish expressed by the Committee of St. Petersburg will, letters state, be reproduced by the Committees of other provinces.

The Vicksburg Whig gives the condition of the armory, and military forces of the State of Mississippi as follows:
400 tons of muskets—all rusty, and no breeches to at least two.

7 cannons—rusty, with no points.
500 belts and scabbards, but no swords.
50 cartridge boxes.

The Waig adds:
"We now have 5 Major Generals, 10 Brigadier Generals, and 60 Colonels, 60 Lieutenant-Colonels, 60 Majors, and will soon have 600 Captains, 1,300 Lieutenants, 4,800 Sergeants, and 4,800 Corporals. We are happy to inform them, however, that we have no privates—the Legislature having dispensed with that useless portion."

RESULT OF KISSING THE BUTCHER.—"My dear," said an affectionate wife, "what shall we have for dinner to-day?"

"One of your smiles," replied the husband; "I can dine on that every day."

"But I can't," replied the wife.
"Then take this," and he gave her a kiss and went about his business.

He returned to dinner.
"This is an excellent steak," said he, "what did you pay for it?"

"Why, what you gave me this morning, to be sure," replied the wife.
"You did!" exclaimed he; then, you shall have the money the next time you go to market."

LOOK AT HOME.—"John," said a clergyman to his boy, "you should become a teetotaler; you have been drinking again to-day." "Do you never take a drop yourself meustier?" "Yes, John, you must look at your circumstances and mine!" "Varra true, sir," says John; "but can you tell me how the streets of Jerusalem were kept so clean?" "No, John, I cannot tell you that."

"Weel, sir, it was just because every one kept his sin door clean."

At a recent conference, in London, of three hundred members of the Society of Friends, it was agreed to sanction marriage between individuals of that community and others, although not in membership, by allowing them to take place with its religious meetings, and that all restrictions in regard to what is called plainness of speech, behavior, and apparel, may also be discontinued!

The oldest piece of furniture is the multiplication-table. It was constructed more than two thousand years ago, and is yet as good as new.

A divine informed a sailor that the devil was chained up. "How long is the rope?" asked the sailor.
"Oh," was the dignified reply, "it extends over the world."

"Does it?" rejoined Jack; "if so, the lubber might as well be loose."

A LESSON IN ENDURING TERMS.—"My dearest Maria," wrote a quite affectionate husband to his wife, a strong-minded woman. She wrote him back, "Dearest, let me correct either your grammar or your morals. You address me, 'My dearest Maria.' Am I to suppose you have other 'dear Marias'?"

Two centuries ago, not one in one hundred wore stockings. Fifty years ago not one boy in a thousand was allowed to run at large at night. Fifty years ago, not one girl in a thousand made a waiting-maid of her mother. Wonderful improvements in this wonderful age.

It has been said that pantalons obtained on credit are breeches of trust.

GENERAL ADVERTISEMENTS.

B. F. SNOW,
COMMISSION MERCHANT,
HONOLULU, OAHU, S. I.,
OFFERS FOR SALE IN LOTS TO SUIT PURCHASERS,
